Fritz Expel-F

Fungal Disease Treatment

- Fast Treatment for True Fungal Infections
- Safe for Most Invertebrates and Plants
- Safe for Fresh and Saltwater Systems

Fritz Expel-F is safe and effective anti-fungal medication for treating infections such as Ichthyophonus hoferi and Saprolegnia, as well as certain other true fungal infections. Fungal infections are generally characterized by white, patchy, cotton-like growths on the body, mouth, or fins. Fungal infections usually occur as secondary infections from a previous wound or injury. Without treatment, fungal infections will spread and ultimately cause death. Fritz Expel-F will negatively affect Bryopsis algae growth.

Dosage / Instructions:

Use one packet of Expel-F per 10 gallons (38 L) in a small container or glass, mix, and add to a high flow area in sump. Powder will dissolve in system over time. Treatment only requires one dose of medication. Treatment period is 14 days.

If necessary, you may perform a second course of treatment. If no further symptoms are observed, replace chemical filtration and resume use of protein skimmers as well as normal feeding. Adjust temperature back to normal.

Use of a hospital tank is recommended. No water changes, pH or temperature adjustments necessary if readings are in ideal range. Remove all chemical filtration (carbon, ion exchange resins) during use. UV Sterilizers, if present, must be turned off during treatment. Aeration and water flow should be maintained. In marine aquariums, turn off protein skimmer during treatment.

Available Sizes / Item # / Treats

Size / Treats	Item #
10 pack (100 gal)	90013
20 pack (200 gal)	90014

ACTIVE INGREDIENT: Each packet contains 200 mg fluconazole

PRECAUTIONS: KEEP OUT OF REACH OF CHILDREN.
FOR AQUARIUM USE ONLY.
